DETAILED ACTION

This action is in response to the application filed on 24 October 2003 in which claims 1-40 are pending. Remarks: Claim 37 is missing. Please correct in subsequent response.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims **1-26 and 34-39**, drawn to linear actuator apparatus, classified in class 381, subclass 412.
- II. Claims **27-33 and 40**, drawn to method of assembling a linear actuator, classified in class 29, subclass 594.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice another and materially different process such as an electromagnetic system having magnetic gap utilizing internal/external permanent magnets.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2615

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Claims **1-3, 6-9, 14-16, 19, 26, and 34** generic to the following disclosed patentably distinct species:

Species **I**: Figure 4 reads on a linear actuator with an externally mounted permanent magnet as taught by claims 5, 10-13, 17-18, 20, 25, 36, and 38.

Species **II**: Figure 5 reads on a linear actuator with an internally mounted permanent magnet as taught by claims 4, 10-13, 17-18, 20, 25, 35 and 38.

Species **III**: Figure 10 reads on a linear actuator with a drilled core as taught by claims 20-21 and 39.

Species **IV**: Figures 11- 12B reads on a linear actuator with a rectangular cross section as taught by claims 22-24.

Claims **27, 30, 33, and 40** generic to the following disclosed patentably distinct species:

Species **V**: Figures 4-5 reads on a method of assembling a linear actuator with a hemispherical magnetic system as taught by claims 28, 29, and 31.

Species **VI**: Figure 10 reads on a method of assembling a linear actuator with a drilled core as taught by claims 31 and 32.

Art Unit: 2615

Species VII: Figure 10 reads on a method of assembling a linear actuator with a drilled core as taught by claims 20-21 and 39.

The species are independent or distinct because the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and

Art Unit: 2615

specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
